TURDIALI XASANBAYEV

Software Engineer (Python / Backend)

Bekabad, Tashkent, Uzbekistan | +998 88 416 20 60 | xasanbayevturdiali7@gmail.com
Website: xasanbayev.uz | GitHub: github.com/turdialixasanbayev | Telegram: t.me/turdialixasanbayev

PROFESSIONAL SUMMARY

Backend-focused Software Engineer with expertise in building reliable, scalable, and maintainable web applications and REST APIs using Python and Django Framework. Proficient in database management with PostgreSQL, web server configuration using Nginx and Gunicorn, and service deployment on Linux (Ubuntu) environments. Adheres strictly to SOLID, DRY, and Clean Code principles to engineer robust backend systems.

TECHNICAL SKILLS

- **Languages:** Python
- **Backend & Frameworks:** Django, Django REST Framework
- **Databases:** PostgreSQL
- **Infrastructure & DevOps:** Linux, Nginx, Gunicorn, Docker, Docker Compose
- **Tools & Version Control:** Git, GitHub, GitHub Actions, Postman, Swagger
- **Engineering Principles:** SOLID, DRY, Clean Code, OOP, PEP 8

FEATURED PROJECTS

iqtisodiybilim.uz | *Full Stack Developer*

- An educational web platform designed to improve economic literacy in Uzbekistan.
- Developed and deployed a dynamic web platform using Django and PostgreSQL.
- Configured Nginx reverse proxy and Gunicorn application server for production deployment on Ubuntu Linux.
- Designed clean database schemas and implemented scalable routing middleware for asset performance.

xasanbayev.uz | *Developer Portfolio*

- A developer portfolio engineered around terminal/IDE interface aesthetics.
- Developed custom Django views and clean template structures to render dynamic project data.

Ulug'bek Abduraxmonov Portfolio | *Portfolio Website*

- A personal portfolio website developed to showcase a Russian language specialist's experience, education, certificates, and contact information.
- Built a structured web interface with dedicated About, Certifications, and Contact sections.
- Implemented section-based navigation and deployed the website using GitHub Pages.

ReelGo Bot | *Telegram Bot*

- A Telegram bot that enables users to download Instagram Reels and images and identify music from audio.

- Implemented media downloading and processing workflows using Instaloader, yt-dlp, and FFmpeg.
- Integrated ShazamIO for music recognition and python-dotenv for environment variable management.
- Developed asynchronous bot operations using Python's asyncio and handled Telegram updates through long polling.

EDUCATION

Gulistan State University - Gulistan, Sirdarya, Uzbekistan

Bachelor of Science in Information Systems and Technologies (2nd-Year Student) | 2025 – Present

CERTIFICATIONS

- **Full Stack Python Development Certificate:** Successfully completed an intensive 1-year professional course covering end-to-end web application development, core Python architecture, Django/DRF backend systems, RESTful APIs, and database engineering.
